

# ESI 3-D

## FILM DESCRIPTIONS

### "MAGIC REEF"

Produced in 1989  
Duration: 13 Minutes

With young diving enthusiasts we explore the coral reefs and marine life of the Red Sea. Through our dive masks we see and reach to touch comical, spiny puffers, polka dotted balloon fish, electric blue and yellow spotted rays, immense and ancient Napoleon fish. Translucent jelly fish drift through our fingers. Displaying territorial behavior, a menacing moray eel emerges for a nose to nose encounter. Shimmering clouds of glass fish scatter in streams of sunlight. A leopard shark startles reef fish into a frenzied flight. A majestic 5 ton manta ray glides silently through the abyss, oblivious to his entourage of pilot fish and a shark seeking protection in the 17 foot span of his wing tips. Delicate and deadly fire fish with lace fringes drift like a choir of ethereal angels in an inky grotto. The magic of polarized light and ESI 3-D lets us see beyond the screen into the depths in a dramatic new experience.
